BEFORE YOU PANIC! 🛑

Child Grazed a Knee?
Does Every Fall Need a TT Shot?

🎉 **NO! 95% of childhood scrapes do NOT need an injection!**

When kids fall, parents often rush to the clinic in fear: *"Jaldi TT lagwao!"* But tetanus germs **cannot survive in open air**. Here are the 2 simple rules every parent should know:

Open Scrapes Are Safe!

- Grazed knee on grass, mud, or road-rash?
- Tetanus germs **hate oxygen** and die instantly on open scrapes.
- Running tap water + soap is **100% all you need**!

🟢 NO INJECTION NEEDED

The 5-Year Shield

- Had routine childhood shots (DPT / 6-in-1) in the last 5 years?
- Your child is **already 100% protected**!
- Only *deep sealed punctures* (rusty nail, animal bite) need a doctor's check.

🛡️ ALREADY PROTECTED

What to Do at Home in 3 Easy Steps

1. Tap Water & Soap
Wash gently for 2 minutes to flush germs away.

2. Vaseline / Cream
Apply ointment. Avoid burning spirit or Dettol!

3. Check Vaccine Card
DPT in last 5 years = 100% safe & protected!
